

Cornerstone Technologies - Web Composer

Enterprise internet development. Real world business tools.

Web Composer: Take control of your website

Use your website more effectively to:

- save money on your website maintenance.
- keep your website accurate and up-to-date.
- do away with costly IT consultants.
- make changes to your website quickly and easily - by yourself!

Cornerstone's Web Composer is an all-in-one system that is powerful, yet extremely easy to use.

In fact, absolutely no technical knowledge is necessary to use it. No HTML, no FTP, and no programming required.

Once Web Composer is set up, you simply update the information on your website using an easy-to-use editor similar to that of MS Word. You'll be up and running in minutes!

Web Composer makes the technical part of maintaining your website(s) a non-issue by generating the HTML, publishing it to the website, guaranteeing that your site meets prescribed accessibility standards, and ensuring that your website has a uniform look.

All of this can be done from any location using just a standard web browser,

allowing you to update your website from your office, home, or anywhere in the world you might be.

Suitable for organisations of all sizes, Web Composer was specifically designed with the small to medium sized organisation in mind.

Whether your website is 50 pages or 500 pages, Web Composer will be able to handle it, offering true site management capabilities.

Cornerstone Technologies will set up the entire system, train your staff, and provide ongoing support, if needed. It's a complete solution and can be implemented in a matter of hours, not weeks.

Looking for a quick return on investment from your website? Look no further. Contact us now for a full demonstration.

FEATURES

Content Management

Anywhere authoring - add and change content from a Web browser anywhere, anytime.

WYSIWYG editing - edit pages using an easy "what you see is what you get" editor, similar to MS Word.

Integrated graphics support - upload images quickly and easily, no FTP required.

Asset Management - upload and manage file libraries quickly and easily, no FTP required.

Advanced HTML - edit tables, use CSS styles, and use many other advanced HTML features easily through our advanced WYSIWYG editor.

Site Management

Page search - find pages quickly within a large website using the integrated page search function.

File management - organise your pages in directories and sub-directories for easy access.

Templates

Multiple templates - create as many templates as you like (graphical and printer-friendly created by default).

Template compatibility - create templates in any HTML editor you like and import them in seconds or edit templates directly.

"Web Composer is an inexpensive self authoring tool that puts the power to control your website at your fingertips."

Michael Lam
Cornerstone Technologies
